Pluggable connection technology in underfloor systems

Modul45 connect with WINSTA® MIDI
Modul 45connect® with WINSTA® MIDI - Plug-in installation solutions for raised and cavity floors

The Modul 45connect for underfloor systems is a continuous, connectable installation technology with WINSTA® MIDI. This is designed for installation in a system floor. Modul 45connect offers the highest level of flexibility, security and cost efficiency.

The system offers all the required installation components: From energy distribution through to device connection in the floor box.
Rapid and toolless installation through Modul 45connect

More safety through pre-terminated and tested systems

Simple post installation and the highest flexibility

Reduction of the fire load

Cavity floor installation
Plug-in device installation solution for raised and cavity floors

Modul 45connect®
Universal supports + sockets

Ready-for-connection universal support for floor boxes

UVS energy distributors

Installation accessories and connection cables
Plug-in connection unit

The ready-for-connection connect UTC universal supports for WINSTA® MIDI are equipped with connection cables for plug-in installation. The cables are connected directly to the underfloor distributors via VL-WIN connection cables.

Raised floor systems

Raised floor systems offer the highest flexibility in the use and planning of office workspaces. This flexibility can be used to the utmost through the use of plug-in connection solutions.

If there are changes of use, floor plates including the floor box can be adapted to the new room planning with little effort – disconnect the pre-terminated connection cable and connect it to the connection unit in the new position.

Energy distributor with WINSTA® MIDI

Energy distributors are used in raised floors with removable floor plates. They are mounted at central points under the floor surfaces and supply the installed floor boxes in a star shape.
Service outlets

All the service outlets from the standard product range can be used in raised and cavity floors. The GES service outlets are available in round and rectangular versions. Plastic or metal are used as materials. The plastic version is the tried-and-trusted solution for office installations. It is available in three colour variants. The metallic stainless steel or aluminium versions look refined and can carry an even greater load.

Other solutions are available for areas with increased floor load requirements.
Ready-for-connection universal support connect UTC

The connect UTC universal supports for WINSTA® MIDI can be ordered as a ready-for-connection unit or freely terminated according to customer requirements.

Combinations of up to two circuits are possible for each connection unit – also with surge protection.
Connection in the floor box

The UTC universal supports with WINSTA® MIDI can be plugged in outside the connection unit. The connected universal support is installed in the floor box by lowering it in the locking ladder. Fastening in the floor box is carried out using the turn buckles in the locking ladder.
Cavity floors

Cavity floors have a support layer of a joint-free, poured screed plate. The installation opening for the installation of floor boxes can be created in two ways in the cavity floor: Either the installation opening is created with a lined body before the screed work, or core drilling takes place after the screed work.

Cable routing

Beneath the screed plate, supply points for the installed floor boxes are set using energy distributors.
Cassettes

The compact, flush-floor cassettes offer power, data and multimedia connections in the smallest areas. The cassettes can be adjusted to the height of the floor and are available in round and rectangular designs. There are versions for dry, moist and wet-care floor coverings.
Installation benefits
Modul 45connect®

Ready-for-connection UTCs for WINSTA® MIDI are plugged in with just a few actions.
Two circuits

Combinations with two power circuits with triple, double and single sockets in UT universal supports are possible. In addition, the use of surge protection modules is also possible on double and triple sockets.
Consolidation Points offer a high level of flexibility and combination options for power, data and multimedia connections.

The electrical supply is possible via both the Modul 45 sockets and the plug connector systems. In the housing, cover hoods can be used to separate the different sockets and to separate the power and data technology.

Data and multimedia technology can be installed in the housing conventionally or with pre-terminated data cables.
Ready-for-connection Connect UTC3 universal support with WAGO WINSTA® MIDI plug connector system. Suitable for the VL connection cables and the device installation units of nominal size 2, 4, R4 and R7. Other variants of the ready-for-connection universal support are possible on request or via self-configuration.
